

NATURE FOUNDATION MODELS

NFM Restaurants

The intelligence layer for robots that work.

Y Combinator Application · Fall 2026

VISION

We build intelligence. Robots execute it.

NFM is the software and intelligence platform that teaches robots how to perform real-world work.

We do not start by building humanoids.

Building the intelligence infrastructure for Physical AI.

THE PROBLEM

Every robot company re-solves the same work

- A robot trained in one kitchen fails in the next.
- Skills do not transfer across sites or hardware.
- Perception, manipulation, planning, and recovery are rebuilt from scratch.
- There is no shared intelligence layer for physical work.

OUR SOLUTION

NFM Physical

Reusable physical intelligence that runs on existing robots.

- Robots learn skills once
- Skills transfer across kitchens, sites, and hardware
- Every deployment makes every other robot smarter

Intelligence that compounds

Physical Data Collection

Skill Extraction

Foundation Models

Shared Skill Library

NFM OS → Any Robot

Every interaction improves the shared intelligence available to every robot running NFM.

The fastest path to Physical AI data

- Repetitive manipulation and structured workflows
- Acute labor shortages and immediate ROI
- Continuous operation and high-frequency data
- Thousands of reusable skills

First revenue. First data. First customers.

PRODUCT 1

NFM Restaurants

Intelligence for commercial kitchens — first.

Then, gradually, hardware research and development optimized for that intelligence.

Software leadership comes first. Hardware follows when the models demand it.

Plan: own a restaurant

Start with a small fast-food drive-through. Robots collect Physical AI data while the restaurant earns revenue selling food and drink.

Capabilities expand — taking orders, serving food — but the priority is expanding robot training.

Not because we want to be a restaurant company — because we need the world's best Physical AI dataset.

- Proprietary real-world episodes
- Safe skill validation before customer deploy
- Continuous model evaluation under real labor pressure

Like Tesla's fleet · Amazon's warehouses · Waymo's taxis — for humanoids.

Profitable businesses. Unmatched data.

Every robot makes every robot smarter

This is the company.

Operate first. Platform later.

The moat is the data flywheel from running restaurants — not selling software first.

Near term

Restaurant operating software · Owned restaurants (data + revenue)

Medium term

Foundation Model APIs · Fleet management (internal) · Managed cloud (internal)

Productizing the infrastructure built to run NFM restaurants and the robot fleet.

Long term

OS licensing · Enterprise deployments · Fleet management (customer) · Managed cloud (customer) · Skill marketplace · Integrated NFM humanoids.

Perfect the system in our own restaurants. Then scale to customers.

ROADMAP

Build → Prove → Scale → Expand → Optimize

Phase 1 — Software for existing humanoids

Phase 2 — NFM Restaurants (owned living labs)

Phase 3 — Restaurant enterprise platform

Phase 4 — Robot-as-a-Service

Phase 5 — NFM Care (hospitals + elder care)

Phase 6 — Integrated NFM humanoid hardware

NFM restaurants are not just customers—they are R&D labs, data engine, and a profitable business.

NFM Care

Hospitals. Senior living. Elder care.

Restaurant skills that transfer:

- Navigation · object manipulation · delivery · cleaning · human interaction

Only medical workflows need to be learned.

Larger TAM. Higher-value work. Natural expansion.

Data from real work. Not demos.

- Owned restaurant operations generate proprietary physical-work data.
- Continuous learning improves models with every deployment.
- Reusable skill library transfers from restaurants to care.
- Hardware-agnostic software today; optimized hardware tomorrow.

THE FUTURE

The operating system for every humanoid

Today: NFM Restaurants

Next: living labs · fleet infrastructure · NFM Care · platform licensing · NFM-optimized hardware

Nature Foundation Models is building the intelligence infrastructure for Physical AI.
