

FINANCE AUTOPILOT

Continuous, autonomous financial operations for high-growth companies

Founder: Ilakkuvaseelvi Manoharan

Finance Autopilot is an autonomous financial system that connects directly to your bank and operational tools, continuously classifies transactions, maintains a tax-aware ledger, and executes financial actions.

It replaces fragmented workflows with a single system that:

- keeps books always up to date
- computes taxes in real time
- executes payments and filings automatically

From raw transactions → compliant, executed financial outcomes.

Overview

Finance is still manual, fragmented, and reactive.

Startups rely on multiple tools and people to manage bookkeeping, taxes, payroll, and payments – with no system owning the full workflow.

Goal #1 – Real-Time Financial State

Maintain a continuously updated,
tax-aware ledger
with no month-end close.

**Goal #2 – Automated Tax
Compliance**

Compute taxes in real time and
generate filings
without manual intervention.

Goal #3 – Autonomous Execution

Execute payments, payroll, and
filings directly
with built-in controls and
auditability.

Objectives and Goals

Build a system that replaces manual
financial operations with
autonomous execution.

Target Audience

04

Built for anyone who wants to manage finances without manual effort.

Individuals

Personal finance, taxes, and payments managed automatically.

Startups & Solo Founders

Operate without finance teams.
Need automated bookkeeping, tax, and payments from day one.

Who This Is For

Users who want:

- real-time financial state
- reduced operational overhead
- systems that execute, not just report

High-Growth Companies

Increasing transaction volume and complexity.
Require real-time financial visibility and execution.

SMBs & Digital Businesses

Fragmented tools across accounting, payroll, and payments.
Need a unified system to manage end-to-end finance.

Competition

05

Financial tools exist – but none own the full financial lifecycle.

QuickBooks / Xero

Strong bookkeeping and reporting
Manual workflows, no autonomous execution

TurboTax / H&R Block

Tax preparation and filing
Periodic, reactive, requires user input

Gusto / Rippling

Payroll and compliance
Limited to specific functions, not unified

Our Advantage

A single system that:

- unifies bookkeeping, tax, payroll, and payments
- operates continuously in real time
- executes actions, not just reports

From fragmented tools → autonomous financial system

Message from the founder

06

Finance should not be something you manage.

It should be something that runs itself.

Today, every company – and every individual – spends time stitching together tools, reconciling data, and reacting to financial tasks that should be automated.

With Finance Autopilot, we are building a system that removes that burden entirely – a system that understands, decides, and executes financial operations continuously.

Our goal is simple:

From manual finance → autonomous financial systems

So builders can focus on what truly matters – creating, growing, and moving forward.
